

NextGenSense Design System

Brand Guidelines & Component Library

Version 1.0 | June 2026

These guidelines outline the official colours, typography, and components for NextGenSense.

Core Brand Colours

Deep Canvas

#0A0A09

Canvas & Page backgrounds

Brand Orange

#FF4F00

Primary accent, alerts, danger states

Electric Lime

#A3E035

Secondary accent, success & verification

Colour Scales

Orange Scale

Anchored at #FF4F00. Use 50–300 for text and tints; 400–700 for interactive states; 800–950 for deep accents.

Lime Scale

Anchored at #A3E035. Ideal for positive states and verification. Use 50–300 for subtle tints; 400–700 for active states; 800–950 for deep accents.

Amber Scale

Use for warning, attention, and pending states.

Rust Scale

Use for archival content, legacy material, and category tags.

Semantic Tokens & Neutral System

Surface Tokens

Canvas: #0A0A09 (neutral-950) — Base for full pages & modals
Primary: #151514 (neutral-900) — Primary surfaces & main cards
Secondary: #262624 (neutral-800) — Secondary surfaces & overlay
Tertiary: #40403D (neutral-700) — Tertiary surfaces & elevated cards

Status Tokens

Success: #A3E035 (lime-500) — Positive states & verification
Warning: #FFBF00 (amber-500) — Warnings & pending
Danger: #FF4F00 (orange-500) — Alerts & danger states
Info: #9A9A96 (neutral-400) — Muted informational states

Text Tokens

Primary: #F8F8F7 (neutral-50) — Headings & high emphasis text
Secondary: #EDEDEC (neutral-100) — Body text & main copy
Muted: #9A9A96 (neutral-400) — Muted text & secondary labels
Disabled: #5A5A55 (neutral-600) — Disabled & subdued text

Action Tokens

Primary: #FF4F00 (orange-500) — Use for primary actions
Primary Hover: #E64700 (orange-600) — Hover state for primary
Primary Active: #BF3B00 (orange-700) — Active state for primary
Secondary: #A3E035 (lime-500) — Use for secondary actions
Secondary Hover: #88BE28 (lime-600) — Hover for secondary
Secondary Active: #688F1E (lime-700) — Active state for secondary

Supporting Colours & Accessibility

Amber Scale

Use for warnings, attention alerts, and pending states.

Rust Scale

Use for archives, legacy content, and category tags.

Accessibility

Ensure sufficient contrast: use Orange 300+ for text on dark backgrounds; Lime 200+ for success messages.

Headings use neutral-50; body text uses neutral-100; disabled states use neutral-600.

Status Labels & Classification Stamp

Classification stamps indicate document

Investigating	Investigating
Verified	Verified
Under Review	Under Review
Disputed	Disputed
Exposed	Exposed
Breaking	Breaking
Leaked	Leaked
Surveillance	Surveillance
AI Crime	AI Crime
FactCheck	FactCheck
Confidential	Confidential
Classified	Classified

Left: Filled labels convey active states. Right: Outline labels for secondary emphasis.

Case headers summarise investigations with metadata. Status tags use colour-coded pills.

Critical	Elevated	Monitoring	Secure
Immediate risk; urgent action needed	Heightened alert; monitor closely	Watching for changes	Stable and controlled

Threat indicators communicate risk levels. Each box uses the appropriate status colours.

Implementation & Automation

- Always reference design tokens (e.g., `var(--dadtd-surface-primary)`) instead of hard-coded values.
- Use filled labels for active states and outline labels for secondary contexts.
- Select colours from the appropriate scale: Orange for alerts/danger, Lime for success, Amber for warnings, Rust for archives.
- Structure your templates to consume variables such as `{{status}}`, `{{case_id}}`, `{{filed_date}}`, and `{{verified_date}}`.
- Automate asset creation via spreadsheets: one row of data can generate dozens of social graphics, thumbnails, and case files.
- Keep backgrounds dark (neutral-900 or 950) to maintain a premium intelligence aesthetic.
- For accessible text, ensure contrast ratios meet WCAG 2.1 AA (4.5:1) or AAA (7:1) standards.
